

VTI BlackCat™ Tactical Coating is the perfect match for extremely demanding usage on modern sporting rifles, pistols, sound suppressors, flash suppressors/muzzle brakes, gas blocks and much more. A perfect fit for tactical applications that demand a deep, matte-black finish that will stand up to the harshest environments, especially regarding heat up to 1700°F, without compromising the integrity of the coating.

The natural lubricity of the coating offers increased functionality in the reciprocating actions of firearms. That means less need for dirt-grabbing oils and external lubrication. This also extends the life of the working components due to lessened friction as well as metal-to-metal contact.

BlackCat™ is a permanently bonded PVD, thin-film coating that excels as a barrier from acids, oils, cleaners & strong industrial solvents.

FEATURES:

- Thermal stability rating of 1700°F (extended periods without failing)
- Tough, rich-black, non-reflective, protective coating
- Excellent corrosion resistance
- Microns thin for close tolerance applications
- Optimum wear resistance & lubricity
- Made in the USA

High performance. Versatility. Excellent value.

APPLICATIONS:

- **FIREARMS**

Close tolerance internal assemblies such as lower frames, triggers, firing pins, mag release pins, ejectors, bolts, bolt carrier groups, hammers. High heat applications such as muzzle brakes, flash suppressors, gas blocks, suppressors. Barrels, cylinders, slides, assembly hardware, quad rails, forearms and more.

- **SCOPES AND OPTICS**

Housing assemblies, mounting bases, rings, assembly hardware

- **KNIVES AND CUTTING TOOLS**

Breaching tools, axes, hatchets, machetes, knives, spear heads, bolt cutters, multi-tools

- **ARCHERY EQUIPMENT**

Risers, assembly hardware, cams, cable guards, stabilizers/weights, releases and more

- **TACTICAL LIGHTS**

Housings, bodies, caps, cases

Look no further than VTI for the best weapon and accessories coating in the Industry.

Founded in 1986, Vergason Technology, Inc. has been a global leader in coatings and shielding services for three decades.

With patents and trademarks in Press-Side® Rapid Cycle Metalizing and CatArc® Cathodic Arc technology, VTI has set the standard in PVD coatings and equipment.

ISO 9001:2008 CERTIFIED
ITAR REGISTERED AND FFL LICENSED
CLASS 3 SOT: NFA FIREARMS DEALER

Commitment to the Environment Our PVD-based coating technologies are clean and safe for the environment, as they produce no harmful fumes or waste products, unlike conventional solvent-based coating technologies. As we continue our pioneering developments, our effort to produce, promote, and utilize environmentally-conscious equipment and practices is core to our company mission.
